

## Overview

## Product information

**DT22MU-K2R/BL-31010000431**

φ22mm Two-position Key Switch head, Color: black, Operation type: Self-Resetting

## Product advantages

- ☑ The shell is made of zinc alloy metal material, with good wear resistance and room temperature mechanical properties
- ☑ Adopt modular design to meet customers' requirements for installation convenience, use flexibility, product durability and so on
- ☑ The button head and the middle seat are fixed with screws, which has stronger anti-impact, anti-drop, anti-vibration and other properties

## Technical specification

|                                   |                                                          |
|-----------------------------------|----------------------------------------------------------|
| Power frequency withstand voltage | 1890VAC/50Hz/60s                                         |
| Impact resistance                 | Button 70g, Mushroom head button 15g, Select switch 200g |
| Environment humidity              | 45-85%RH                                                 |
| Vibration resistant               | 1.0mm/50HZ                                               |
| Mechanical life                   | ≥ 500,000 times                                          |
| Nominal insulation voltage        | 440V                                                     |
| Conventional heating current      | 10A                                                      |
